

## ABOUT ME

Since 2005 I have been working as a freelance web and UI/UX developer focusing on frontend, UI/UX, TYPO3, Vue/Nuxt, and project management.

As part of my self-employment, I have experienced numerous projects of different sizes and requirements and have been involved as a project manager from A to Z. I understand the ability to communicate complex, technical issues in a comprehensible way to stakeholders as well as within an interdisciplinary team as one of my core competencies.

Between 2008 - and 2015 my main focus was TYPO3. Besides developing Projects with TYPO3, I was an active member of the TYPO3 community.

Over the years I was able to develop deep knowledge in the area of UI/UX. I use the Atomic Design in Figma to implement wireframes, prototypes, and design systems. I know Photoshop, Illustrator, and Axure.

Responsive implementation I have realized even before the rise of Twitter Bootstrap. Today my favorite is TailwindCSS in combination with component-oriented architectures. In principle, I use any frontend framework or template language like Twig, Handlebars, Liquid, or similar.

Working in SCRUM-oriented teams, with modern CI and deployment cycles and Git is part of my daily work environment.

As part of the Google Developer Challenge EU 2017, I qualified in the top 10% out of 60,000 participants, giving me access to a scholarship sponsored by Google.

The scholarship gave me access to the Frontend Developer Nanodegree program at Udacity. The focus of the course was Javascript and modern front-end technologies, especially React.

Later, however, I focused on Vue/Nuxt. Especially in the last two years, I could deepen my Vue/Nuxt knowledge in larger projects.

I would be happy to share my knowledge and skills with you for your next project. Please see an overview of my background and some references on the following pages.
